

ForaCare Introduces Test N'GO – The meter that wirelessly sends glucose results to the cloud

– FORA Test N'GO, the new standard for wireless cloud based diabetes management –

MOORPARK, CA – February 6th 2014 – ForaCare, Inc. is excited about our recent new product launch announcement, FORA Test N'GO, our most advanced Blood Glucose Monitoring System. Using its Bluetooth connectivity, the FORA Test N'GO wirelessly transmits blood glucose readings to the iFORA App on the patients' smartphone. The test results are then seamlessly uploaded to ForaCare's TeleHealth cloud server, allowing caregivers instant access to view patient data from anywhere! "With the FORA Test N'GO people with diabetes can now record, track, and manage their diabetes while on-the-go!" said CEO Sophia Wu. The FORA Test N'GO is a cutting-edge, No Coding meter with superior GDH-FAD strip chemistry – no interference with maltose, galactose, and oxygen.

Traditional blood glucose meters require patients to manually record their readings in a log book and bring that information to their doctor. This conventional way has been the industry standard until recently, with the FORA Test N'GO, patients don't have to manually record their readings and doctors don't have to wait to give therapeutic responses. The data exchange between the FORA Test N'GO, iFORA app and ForaCare's TeleHealth cloud server is instantaneous. "This innovative technology can be used for Accountable Care Organizations or insurance companies who wish to monitor a person with diabetes blood sugar levels to help avoid emergency room visits or even hospital stays" said Doug Kuzyk EVP for ForaCare.

The benefits of the cloud are endless! Improve patient outcomes by monitoring your patients on a daily, weekly and monthly basis, improve their compliance and reduce your costs by identifying key problems early. Patients also benefit from the iFORA app on their smart phones, they're able to track their results and see trend graphs which help give them a better understanding of their readings and what that means to their diabetes care.

FORA Test N'GO Meter Features

- Superior GDH-FAD Strip Technology
- No-Coding
- Tiny .5µL blood sample
- Data upload via Bluetooth Connectivity
- Legible Backlight Display
- Rechargeable Battery
- Fast 5 second test results
- Integrates with iFORA Diabetes Manager Application
